

ZYVORAI LABS · CUSTOMER DOCUMENTATION

Zyvor Argus

Customer Documentation Overview

2026-08-29

Zyvor Argus (CLI: `argus`) is the autonomous AI QA agent for Zyvor products — LangGraph specs→Playwright, **Mission Control** (flows, HAR, codegen, API/auth/realtime, vitals, probes), and post-deploy audits. This package is for QA engineers, SREs, and platform operators — not people hacking on the agent source tree.

You want to...	Open
Which product? Community vs Watchfloor	Which product
Install Docker/Helm/Community first	Install prerequisites
Install and first smoke	Getting Started
Learn Mission Control	Using the Dashboard
Test zyvor.dev (video + HAR)	Test zyvor.dev
Ask Zyvor knowledge Q&A	Tutorial 14
Follow a card, step by step	Page-by-page guides
Multi-step jobs (flow, HAR, API...)	Common workflows
Look up any surface	Complete page index
Deploy, auth, ports, k3s	Admin basics
Enterprise SSO / Keycloak demo logins	Enterprise SSO / OIDC
Browse capabilities by theme	Feature Guide

Printable PDFs

```
node scripts/customer-docs/build-customer-pdfs.mjs
```

Output lands in `pdf/` :

PDF	Contents
<code>ZyvorArgus-Customer-README.pdf</code>	This overview
<code>ZyvorArgus-Getting-Started.pdf</code>	Access, Mission Control basics, workflows
<code>ZyvorArgus-Page-by-Page.pdf</code>	Complete manual — every dashboard surface
<code>ZyvorArgus-Admin-Basics.pdf</code>	Deploy, auth, TLS, ports, Enterprise SSO / Keycloak

The build regenerates indexes first. Check links with `node scripts/customer-docs/check-links.mjs` .

Publish to the product site:

```
node scripts/customer-docs/cync-to-gh-pages.mjs -p/zyvorai/pdf
```

Product at a glance

Mission Control → `argus serve` (default NodePort / port 30080)

CLI → `argus test exec | run | flow | har-replay | ...`

Playwright → `playwright/` + generated & manual suites

Webhooks → `POST /webhook/github` (HMAC)

REST → `/api/dashboard/*` (session-gated when password set)

How this manual is organized

1. **Getting started** — which product (Community vs Watchfloor), install prerequisites, first smoke.
2. **Using the dashboard** — hero, actions grid, live job panel, ⌘K, schedules.
3. **Page-by-page** — a guide for every Mission Control surface and action card.
4. **Page index** — every surface with a one-line purpose and guide link.
5. **Admin basics** — remote deploy, ports, Mission Control login, k3s vs systemd.
6. **Enterprise SSO** — Keycloak / OIDC, demo logins (`demo / demo` , `ssouser / Sso@321`), local username/password for Argus Enterprise.

Deep engineering docs live under `../` (architecture, tutorials, configuration) and are out of scope for this customer package.

Support surfaces (quick map)

Need	Typical path
Status & pods	<code>/dashboard</code> hero + Workloads / Pods
Smoke / full pipeline	Actions → ▶ Run tests
E2E journey + video	Actions → 🎬 Flow test
Demo site recording	Test zyvor.dev
HAR record / replay	Actions → 📺 HAR
Import Playwright codegen	Actions → 📄 Import codegen
API / auth / live data	Actions → 🔑 / 🗝️ / 📡
Continuous monitors	Schedules panel
What's broken	Findings panel
Enterprise SSO / demo logins	Enterprise SSO / OIDC (<code>demo</code> / <code>demo</code>)
